

EduTracker ERP: Client Deployment & One-Click Installation Manual

This guide is for the deployment team responsible for installing the system at a client's physical location.

1. Preparing the Distribution (On Your Machine)

Before visiting the client, prepare the “Code-Free” package: 1. **Build Production Files:** `bash npm run build; cd backend; npm run build; cd ..` 2. **Delete Source Folders:** Delete all `src` folders and `.git` folders. 3. **Final Package Check:** Ensure the following are in your `EduTracker_Release` folder: * `.next` & `backend/dist` (Compiled Code) * `node_modules` (Dependencies) * `START_SYSTEM.bat` & `setup.ps1` (Operational Scripts)

2. Client Machine Prerequisites

Ensure the client's PC has: 1. **Node.js (LTS):** Download from nodejs.org. 2. **PostgreSQL (v16+):** * **Password:** 123456 * **Database:** edutracker 3. **Local Network Access:** The PC should be connected to the school's Wi-Fi or Ethernet.

3. Installation Step-by-Step (At Client Office)

1. **Transfer Folder:** Paste the `EduTracker_Release` folder onto the client's main server PC (usually on D: drive).
 2. **Bypass Execution Policy:**
 - Open **PowerShell** as **Administrator**.
 - Run: `Set-ExecutionPolicy -ExecutionPolicy RemoteSigned -Scope CurrentUser`
 3. **Run One-Click Setup:**
 - Right-click `setup.ps1` and select **Run with PowerShell**.
 - **What this does:**
 - Detects the school's Wi-Fi IP address.
 - Automatically configures `.env` with the correct network URL.
 - Installs system-level dependencies.
 - Creates a **Desktop Shortcut** named “EduTracker ERP”.
-

4. Launching the System

1. **Double-click START_SYSTEM.bat:** This opens the terminal that runs the app. **Tell the client to keep this window open.**
 2. **Double-click “EduTracker ERP” shortcut:** This opens the app in the browser.
-

5. Configuring Wi-Fi Access for Staff

To allow other staff to access the ERP from their own laptops: 1. Ensure all devices are on the **Same Wi-Fi**. 2. Note the IP address in the **START_SYSTEM.bat** window (e.g., <http://192.168.1.50:6001>). 3. Type that address into any device’s browser. 4. **Done!** The system is now live across the campus.

6. Safety Protocol (Backup)

Show the client how to protect their data: 1. Go to **Settings > Database & Backup**. 2. Click **Backup Now**. 3. Help them copy the resulting file to a USB drive as their “First Safe Snapshot.”
